

Student Engagement Survey

Students who are engaged at school are likely to further their education and experience post-secondary success. The School Perceptions Student Engagement Survey measures six indicators including connectedness, drive, leadership, motivation, social & emotional aptitude, and wellness.

The School Perceptions Student Engagement Survey measures six indicators including connectedness, drive, leadership, motivation, social & emotional aptitude, and wellness. School Perceptions' research has shown that there is a correlation between index scores, school engagement and lifelong success.

Schools are encouraged to have all students take the survey. Completion times for the survey will vary by student. However, most students should be able to complete the survey within 10 - 15 minutes. The survey yields index scores of 1 to 4 for each area of student engagement. Research shows that a student index score of greater than a 3 indicates strength in the engagement indicator.
